## COMPANY OVERVIEW

Spectrum Resources leverages extensive Information Technology experience to help companies address their I.T. challenges. With our direction, I.T. departments become more strategically integrated with the rest of the company by focusing on key application integration and expansion. We define needs and develop strategies that improve I.T. responsiveness and provide higher service levels.

Spectrum's team of seasoned business professionals has serviced clients in the Midwest since the 1970s. We understand the history and evolution of technology. An Information Technology department is no longer just a technical center. Instead, it should be a tool for enabling your business to operate more efficiently and more profitably. We strive to become strategic partners with our clients. We offer insight about a company's infrastructure and operations, which enables management to make critical decisions to move their business forward. We can also footprint an organization's hardware and software needs. Then, we provide the tactical resources to support those needs.

Spectrum's clients range from large international companies to privately held Kansas City based businesses. We have the time and the knowledge base to help your company with its I.T. needs, no matter how large or small.
